# FIRE ACTIVITY

## Erskine, Vegetation Fire, Lake Isabella, Kern County

### Recovery

#### **Initial Damage Estimates and Preliminary Damage Information:**

- Kern County Building, Environmental Health and Sheriff's Office representatives conducted an assessment in Squirrel Valley and South Lake. Public Health teams assessed properties affected by the fire for debris management and initial hazards; and are in the process of reviewing water systems in the area. Building Inspection teams assess safety of the structures and placed a colored tag on each structure: Red means do not enter or occupy structure; Yellow means restricted access, and specific instructions are written on the tag; and Green means lawful occupancy permitted and that no apparent structural hazard has been found.
- Cal OES Public Assistance has deployed two Disaster Assistance Programs Specialists to the Kern County EOC to coordinate hazardous materials debris operations.

#### **Debris and Hazardous Waste Management**

- Cal Recycle standing by for situational awareness and possible tasking for debris removal and are in contact with local authorities concerning landfill capacity.
- Department of Toxic Substance Control (DTSC) will be at the EOC on 6/29/16 to begin coordination of Household Hazardous Waste (HHW).
- Trash collection sites were established for food waste and basic household trash only, which resulted from prolonged loss of power due to the fire. No bulk waste, hazardous waste or ash debris will be accepted.

[http://www.wrh.noaa.gov/sto/brief/wwa\\_bc\\_cal.php](http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php)

# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

Hot, dry weather will continue through the early next week. Triple digit afternoon high temperatures right around 105 will continue for the warmest areas through the end of the week. The very southern edge of a large Gulf of Alaska low pressure system will begin to affect Northern California Thursday, but temperatures won't be cooling much until this weekend when the mid and upper 90s are expected for the warmest inland areas. Low afternoon RH and mostly moderate overnight RH recovery will continue in most areas away from the marine layer. The marine layer may deepen somewhat this weekend, otherwise, it will remain relatively shallow. A bit more moisture will be over the NW portion of Northern California, especially this weekend, but it's mostly some afternoon cumulus cloud buildups that are expected to develop there. No afternoon or evening thunderstorms are *likely* to form over the NW mountains or around Tahoe, but a few may become possible as early as Thursday then again over the weekend. Any that do form would tend to be rather dry. Diurnal, locally driven afternoon wind patterns will prevail in most areas, so seasonable wind speeds and directions are expected during the peak burning period each day. There will be light overnight northerly winds, but portions of the northern Sacramento Valley will have somewhat stronger speeds Thursday night than have been occurring. At this time, NO HIGH RISK conditions are anticipated.

## **SOUTHERN CALIFORNIA**

Isolated to scattered thunderstorms over the mountains and deserts today. Hot away from the coastal areas today. A weak disturbance near the California/Nevada border will bring isolated to scattered showers and thunderstorms to the Sierra and to the mountains and deserts of Southern California from San Bernardino County northward through this evening. This disturbance will move well off to the northeast by Thursday ending the shower and thunderstorm threat across most of the region. However, another disturbance will move over Arizona bringing scattered showers and thunderstorms to the deserts bordering the Colorado River Thursday and Friday. Strong high pressure currently over Colorado will continue to bring well above normal temperatures away from the coastal areas today, with mid 80s to mid 90s across the mountains and mid 90s to 108 in the valleys. Minimum humidity will be mainly between 12% and 25% away from the coastal areas today. A Pacific trough will deepen over the West Coast Thursday and Friday bringing significant cooling to the area and a deeper marine layer to the coastal areas. The trough will most likely stay overhead through early next week, with near normal temperatures beginning Friday. The marine layer will bring morning low clouds and fog to most coastal valley locations Friday through early next week. Minimum humidity will lower to the single digits and teens above and inland from the marine layer Thursday through early next week, except it will be much higher near the Colorado River. South to west afternoon winds of 15 to 25 mph with gusts to 40 mph will surface across the mountain ridges and desert passes Thursday through early next week.
